### QMC 411 – Quick Change Disc for stainless steel and metals

The Quick Change Discs with metal locking are marked by their particularly **high removal rate**, which makes them an excellent choice for a wide variety of applications. The abrasive is equally well suited for different applications and materials including

- stainless steel and
- other metals.

The products offered by Klingspor stand out with their easy handling and the option for the user to change abrasive discs with exceptional speed. Their unique qualities make these discs an outstanding choice for hobby craftsmen and professional users alike. Another benefit is the extensive selection of available grit sizes and diameters. This comprehensive selection allows the user to find the disc that matches their particular tool and sanding application best.

#### Ultimate power thanks to self-sharpening zirconia

The Quick Change Discs with metal locking rely on a self-sharpening zirconia grain and a high-quality synthetic resin bond. This product delivers a high removal rate on such materials as steel and **stainless steel**.

Meanwhile, its aggressive grinding properties allow for a fast work speed. This is why **zirconia** is the material of choice for professionals. The ease of use and smooth operation of this product ensure that the user will produce uniform finishes and be able to work over long periods without fatiguing.

#### Suitable for the QMC system

The Quick Metal Connect (QMC) makes it possible to simply position the abrasive disc on the backing pad and screw it in place with an internal thread. Klingspor offers a similar product which can be fixed in place by means of a plastic threaded as part of the Quick Roll Connect (QRC) system. Both products represent systems that are widely used on the market and provide for secure and dependable attachment on the backing pad. Another plus is that the Quick Change Discs can be used on any standard angle grinder. Klingspor offers a matching adapter for this purpose.

Diameter in mm	Grit	Type of coated abrasives	Cat.number
50	36	CS 411 Y	295300
