

# Data Sheet

## KL 385 JF Rolls with cloth backing for Metals, NF metals

### Applications

Metals	●	Bonding agent	Resin
NF metals	●	Grain	Aluminium oxide
Stainless steel	○	Coating	Close
Plastic	○	Backing	JF-cotton
Wood	○		

### Properties

### Klingspor abrasive roll KL 385 JF – the dependable and affordable all-purpose product for profile sanding

The abrasive roll KL 385 JF made by Klingspor is a premium-quality product that sets itself apart by an unrivalled price-performance ratio. This roll with **brown cloth** offers versatile usability and contours perfectly to the workpiece you need to sand. Especially suited for profile grinding of metals, the product truly shines when used for grinding by hand.

#### Close coated aluminium oxide grit for clean profile grinding of metals

The abrasive applied to the abrasive roll KL 385 JF is aluminium oxide. Suitable for comprehensive use ranging from coarse grinding to finish grinding, this abrasive roll adapts perfectly to the contours of the workpiece you need to grind. The abrasive is held in place by a resin bond. Its synthetic resin bond combined with the aluminium oxide grit makes the KL 385 JF abrasive roll an exquisite choice for grinding metals such as general metals and non-ferrous metals. Aluminium oxide is an incredibly effective abrasive on account of its remarkable hardness.

#### The superior flexibility of its cloth backing makes it uniquely capable as a hand grinding tool

The KL 385 JF abrasive roll is furnished with a flexible cloth backing made of cotton, allowing for perfect contouring to the workpiece and, thus, professional work results. Specially designed as a **flexible cloth** for profile grinding by hand and achieving a perfect finish on the workpiece, the product is equally capable when used on hand-operated grinders. The material can be torn off the roll in a perfectly clean and easy manner.

Width in mm	Length in mm	Grit	Type of coated abrasives	Cat.number
